

AHMAD KAMAL ANWAR

Senior Software Engineer · +923078851824 · ahmadkamilanwar.it@gmail.com · Lahore, Punjab, Pakistan

PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of enterprise backend and full-stack development experience, specializing in PHP, Laravel, and Symfony. Proven track record of architecting scalable REST APIs, designing high-performance database schemas, and leading cross-functional engineering teams across SaaS, AI, and geolocation platforms. At Devsloop Technologies, applies AI-augmented engineering workflows (including GitHub Copilot, Claude, and Cursor) for intelligent pair programming, prompt-driven development, and accelerated code reviews, shipping production-ready systems faster without compromising architectural integrity. Brings deep expertise in queue-driven architectures, OpenSearch integrations, and CI/CD pipelines to every engagement.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, SQL

Backend Frameworks: Laravel, Symfony, CodeIgniter, FastAPI, API Platform

Frontend: React.js, Next.js, Vue.js, Tailwind CSS, Angular

Databases & Storage: MySQL, PostgreSQL, Redis, MongoDB, Firebase, SQLite

Search & Caching: OpenSearch, Elasticsearch, Redis

Cloud & Infrastructure: AWS (EC2, S3, RDS, Lambda), Docker, Nginx

CI/CD & DevOps: GitHub Actions, Jenkins

Messaging & Queues: RabbitMQ, SQS, Laravel Queues, Mailjet, Resend

APIs & Security: REST APIs, GraphQL, OAuth 2.0, JWT, Rate Limiting, CORS

Testing & QA: PHPUnit, Postman, Unit Testing

AI Development: Claude, ChatGPT, GitHub Copilot, Cursor, Windsurf

Architecture & Patterns: Microservices, SOLID Principles, Repository Pattern

Developer Tools: Git, GitHub, GitLab, PhpStorm, VS Code, Postman, Workbench, Jira, Asana, Slack

Methodologies: Agile, Scrum, Code Review Best Practices, CI/CD

WORK EXPERIENCE

Senior Software Engineer · Devsloop Technologies

Nov 2024 – Present

- Architected and led core backend systems for Rapid Translate and GeoPlugin in a team lead capacity, establishing scalable service layers and driving engineering standards across the team.
- Spearheaded full-stack feature development for Gore Ad, engineering high-performance Laravel APIs and modern frontend modules across a high-volume social media growth platform.
- Drove improvements to code quality, database schema design, and system architecture across Rapid Translate and GeoPlugin, achieving measurable gains in performance and developer velocity.
- Applied AI-augmented development practices (including Claude, Cursor, and GitHub Copilot) to accelerate delivery, sharpen code review quality, and strengthen overall engineering output.

Senior Software Engineer · WorkHub

Jun 2022 – Nov 2024

- Designed and developed the Help Desk product from end-to-end, building the ticketing system, email integration engine, and automated workflow layer, taking full ownership of the engineering lifecycle.
- Integrated OpenSearch into the WorkHub ecosystem, significantly reducing search response times and improving result relevance across ticket and knowledge base search.

- Delivered a fully redesigned Help Desk UI that drove measurable improvements in user engagement and positively impacted sales conversion.
- Implemented core backend features for WorkBot, WorkHub's AI-powered enterprise assistant, applying best-in-class security protocols and performance optimizations.
- Served as Backend Lead for the Scheduling, Connect, and Admin modules, owning architecture, schema design, API contracts, and code quality across three concurrent product workstreams.

Software Engineer · Coeus Solutions GmbH

Oct 2019 – Jun 2022

- Designed, architected, and delivered the Moderation, Tagging, and Data Lake systems end-to-end within eKomi's enterprise microservices architecture, taking full engineering ownership of each module.
- Revamped the reporting systems across the Data Lake and Tagging platforms, introducing graph-based visual analytics that transformed raw operational data into actionable business insights.
- Engineered automated and manual tagging workflows for customer feedback data, enabling enterprise clients to process, analyze, and act on sentiment at scale.
- Delivered a redesigned Tagging architecture that significantly improved platform stability, data throughput, and long-term maintainability.
- Built the Pulse Dashboard, a centralized visual reporting tool for monitoring feedback moderation and tagging pipeline progress across eKomi product lines.

KEY PROJECTS

Rapid Translate | Enterprise Certified Document Translation Platform · rapidtranslate.org

Stack: PHP · Laravel · MySQL · REST APIs · AWS · Docker · Mailjet

- Architected scalable Laravel backend services for a USCIS-accepted certified document translation platform, supporting enterprise-scale workflows across nearly all document types and industries.
- Designed secure REST API endpoints for document submission, translation tracking, and certified delivery workflows, ensuring compliance with USCIS and official authority requirements.
- Optimized database schemas and query performance to support high-throughput document processing pipelines under peak load conditions.
- Integrated third-party translation APIs and Mailjet notification services, automating the delivery pipeline and reducing manual processing overhead.
- Led architecture reviews and enforced code quality standards, improving system reliability, developer velocity, and long-term platform maintainability.

GeoPlugin | IP Geolocation & Real-Time Reverse Geocoding Platform · geoplugin.com

Stack: PHP · Laravel · MySQL · Elasticsearch · REST APIs · AWS

- Led backend development and performance optimization of GeoPlugin's core IP geolocation engine, enabling real-time city-level visitor identification for enterprise clients at global scale.
- Optimized SQL query performance and introduced caching strategies to achieve low-latency API responses across high-traffic international request volumes.
- Refactored core backend services to improve horizontal scalability, eliminate technical debt, and align the platform with modern architectural standards.
- Strengthened API security through rate-limiting, input validation, and abuse prevention mechanisms, ensuring platform availability and data integrity for enterprise clients.

Gore Ad | Social Media Growth & Engagement Platform · goread.io

Stack: PHP · Laravel · React · TypeScript · MySQL · REST APIs · Docker · Github Actions

- Spearheaded full-stack feature development across Gore Ad's platform, engineering high-throughput backend APIs and modern frontend modules supporting Instagram and TikTok growth services.
- Built secure order processing, delivery tracking, and social platform integration APIs, ensuring reliable end-to-end service execution at scale across a high-volume commercial platform.
- Developed reusable React.js and TypeScript frontend components, improving UI consistency and accelerating cross-team feature delivery velocity.

- Designed and implemented secure payment flows and order management systems, strengthening transaction integrity and user trust.

DeepAlgo | AI-Powered Retail Trading Platform · [deepalgo.framer.ai](#)

Stack: Python · FastAPI · Postgres · REST APIs · Typescript · Next.js · Github Actions

- Contributed to backend architecture design for DeepAlgo's AI-powered trading platform, engineering REST API layers connecting AI-driven signal processing to trading execution workflows.
- Implemented secure JWT-based authentication and role-based access control, ensuring data integrity and platform security for retail traders accessing sensitive financial information.
- Engineered data ingestion pipelines integrating AI model outputs with the trading interface, enabling real-time signal delivery and market analysis for end users.
- Optimized backend performance under concurrent load conditions, improving system reliability for latency-sensitive trading operations.

Help Desk | Enterprise Customer Support & Workflow Automation Platform

Stack: PHP · Symfony · MySQL · OpenSearch · Automation · Multi-Tenant

- Architected and developed the Help Desk platform from the ground up, owning the database schema, ticketing engine, email ingestion pipeline, workflow automation, and API architecture.
- Designed the platform as a multi-tenant system from the beginning, establishing an architecture capable of supporting growing enterprise customer workloads.
- Integrated OpenSearch to replace slow SQL-based full-text search, reducing agent-facing search from multi-second scans to **sub-second retrieval** across large ticket backlogs.
- Built automated workflow capabilities for ticket processing and customer support operations, reducing repetitive manual work for support teams.
- Delivered a complete Help Desk redesign that improved product engagement, activation, and sales conversion during the onboarding funnel.
- Owned the product through the full engineering lifecycle, from initial architecture and schema design through production delivery.

ElleQuant | AI-Powered Private Equity & Investment Intelligence Platform

Stack: PHP · Symfony · MySQL · React · Docker · OpenAI · REST APIs · Automation

- Built full-stack features and integrations for a private-equity workflow platform, working across React frontend services and PHP/Symfony backend systems.
- Integrated OpenAI-powered automations to assist analysts with data extraction, analysis, and structured investment workflows.
- Designed backend processing layers to validate, normalize, and structure AI-generated outputs before integrating them into existing reporting and data pipelines.
- Engineered automation workflows that reduced manual data extraction and helped investment professionals reach actionable insights faster.
- Developed reliable AI-assisted workflows with a strong focus on data accuracy, structured outputs, maintainability, and enterprise usability.

WorkBot | Enterprise AI Assistant · [workhub.ai](#)

Stack: Python · FastAPI · Postgres · REST APIs · Typescript · React · AI/LLM Integrations · Docker

- Led backend development for WorkHub's AI-powered enterprise assistant, building API services, data models, integrations, and workflow automation capabilities.
- Designed REST APIs connecting WorkBot with the broader WorkHub product ecosystem, enabling intelligent querying, knowledge retrieval, and action-oriented enterprise workflows.
- Implemented AI-powered integrations and backend validation layers to ensure structured and reliable outputs before they entered downstream business workflows.
- Engineered enterprise-ready service architecture with security, authorization, and performance considerations across AI-driven workflows.

- Built extensible integration points allowing users to interact with business systems through natural-language workflows instead of complex tools, scripts, or disconnected applications.

eKomi Feedback Intelligence Platform | *Moderation, Tagging & Data Lake* · ekomi.com

Stack: PHP · Symfony · MySQL · REST APIs · Microservices · Data Processing · Data Visualization · Docker

- Designed, architected, and delivered the Moderation, Tagging, and Data Lake platforms end-to-end within eKomi's enterprise microservices architecture, taking full ownership of system design, backend development, integrations, and production delivery.
- Engineered automated and manual workflows for processing, moderating, and tagging customer feedback at scale, enabling enterprise clients to efficiently analyze and act on customer insights.
- Architected data synchronization and processing pipelines to ingest feedback from distributed services and reliably move data across the Moderation, Tagging, and Data Lake ecosystem.
- Redesigned the Tagging architecture by decoupling data-processing pipelines from the API layer, improving platform stability, throughput, scalability, and long-term maintainability.
- Revamped reporting across Tagging and Data Lake, introducing graph-based visual analytics that transformed distributed operational data into actionable insights on feedback processing, team performance, and workflow progress.
- Built the Data Lake reporting layer to aggregate data across eKomi's microservices, providing centralized visibility into moderation, tagging, and feedback-processing operations.
- Developed the Pulse Dashboard as a centralized visual monitoring layer for tracking moderation and tagging pipeline progress across eKomi product lines.
- Optimized database queries, data-processing workflows, and service integrations to support reliable performance under enterprise workloads and continuously evolving data volumes.

Vision-Score | *AI-Powered Computer Vision Customer Tracking Platform*

Stack: Python · FastAPI · Postgres · REST APIs · GCP · Docker · Computer Vision

- Architected backend services for an AI-powered retail analytics platform that uses computer vision to automatically identify and track customer visits within physical stores.
- DArchitected backend services for an AI-powered retail analytics platform that uses computer vision to automatically identify and track customer visits within physical stores.
- Engineered scalable data-processing workflows to transform computer vision events into structured customer visit and behavioral data.
- Optimized backend services and database operations for reliable processing of high-volume customer activity data.
- Translated complex computer vision capabilities into maintainable business workflows that provide retailers with actionable customer insights and operational visibility.

WorkHub Platform Services | *Enterprise Authentication, Communication & Scheduling Platform* · workhub.ai

Stack: PHP · Symfony · Laravel · MySQL · REST APIs · Microservices · Docker

- Served as Backend Lead across WorkHub's Admin, Connect, and Scheduling products, owning architecture, database design, API contracts, and backend development across multiple concurrent product workstreams.
- Architected WorkHub Admin as a centralized authentication and Single Sign-On layer, providing secure identity and access management across the WorkHub product ecosystem.
- Integrated APIs and distributed services to synchronize feedback data across eKomi's microservice architecture.
- Architected Scheduling services supporting appointment booking, calendar coordination, availability management, and meeting workflows.
- Designed shared service integrations and API contracts enabling seamless interoperability between WorkHub products while maintaining clear service boundaries and maintainable architecture.
- Established security, authorization, coding, and architectural standards across the three products, improving reliability, consistency, and long-term maintainability.
- Led technical decisions across a 3–6 person engineering team, driving schema evolution, performance optimization, code quality, and production reliability.

Pulse Dashboard | *Enterprise Feedback Moderation & Analytics Dashboard*

Stack: PHP · Symfony · MySQL · Microservices · REST APIs · Docker · Data Visualization

- Architected and developed a centralized dashboard for monitoring feedback moderation, tagging, and processing pipelines across eKomi's product ecosystem.
- Aggregated operational data from multiple microservices into a unified reporting and visualization layer.
- Built visual analytics that enabled teams to monitor processing progress, operational performance, and feedback workflows.
- Designed reporting workflows that transformed distributed operational data into actionable insights for enterprise teams.
- Integrated the dashboard into eKomi's broader microservice architecture while maintaining reliable data synchronization across services.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

2015 – 2019

University of Sargodha
